## Top 25 Cyber Security Technology Companies 2017

The evolution of virtual crime network over the years has had a direct impact on everything—from share prices and revenue streams to regulatory compliance and brand reputation. Even multi-billion dollar organizations' business identities are being compromised due to the intelligence employed by cyber criminals in their cyber damaging threats. Rather than sticking to traditional threat mitigation strategies, the need of the hour is to deeply integrate an advanced security infrastructure into today's enterprise environment.

Given the way the market is constituted today, many comprehensive endpoint security solutions are being developed by the world-class cyber security developers around the world. While these advanced endpoint security solutions ensure improved security and business continuity management, they also act as custodians—proactively managing the day-to-day process of network operations.

Today, along with the emerging security analytics capabilities, the continuous monitoring and analysis capabilities of cloud security services are also playing a pivotal role in guarding against these damaging cyber threats. Moreover, enterprises' initiatives to work in cohesion to safeguard their business identities and fight cyber warfare will also contribute to the sweeping changes in the cyber security industry.

To help enterprises ensure the total security of their working environments, we present to you "Top 25 Cyber Security Technology Companies 2017". The list brings to light the companies that are at the forefront of leading businesses towards building a next-generation security infrastructure. Highlighting the companies in the proposed list, our editorial team endeavours to bring out the players that have a robust security portfolio in the cyber security landscape.

## IshanTech: Redefining IT Security Solutions

The security solutions needs have to be constantly aligned with business objectives and goals. Whether it is web applications or sensitive corporate information, organizations have to implement technologies that precisely secure their critical resources from attack. Due to the various security breaches and escalating risks that are widespread in cyber space, the need to adopt new technologies and architectures that can deliver powerful security, privacy, and compliance protection becomes significant. Founded in 2008, IshanTech is one such company which was started with the idea to focus on IT security solutions. The company brings in innovative IT Security solutions to address the risk of its enterprise clients and the individuals affected by cybercrime.

"We understand the data security needs of our customers and offer security services to help enterprises deploy proven risk and compliance management solutions and approaches," states Ruben Theva, Director of IshanTech. Being an exclusive partner of ESET and WinMagic, IshanTech renders Endpoint security and Data protection solutions to meet the cyber security needs of its customers and thus ensures the security of their assets. Adding to the pool of its offerings, the company leverages comprehensive anti-malware protection for its customers' business systems with ESET Endpoint Security. "With Endpoint Security, powered by proven NOD32, we offer proactive anti malware defense combined with robust web and device management features," adds Theva.

Another robust product from IshanTech is WinMagic—protecting valuable information assets against unauthorized access. With this tool, users can encrypt files themselves before uploading them to larger storage services. WinMagic is not only used to secure data but it also en-

ures seamless access without impeding the productivity of businesses. "WinMagic's SecureDoc secures data wherever it is stored, providing enterprise grade data encryption and key management policies across all operating systems, thus protecting valuable information assets against unauthorized access," adds Theva. SecureDoc's Standalone Edition allows businesses to deal with their IT environment security methodically to improve security, mitigate risk, and meet government and regulatory norms for hard drive encryption. On the other hand, SecureDoc's Enterprise Edition takes all the features of Standalone and gives control to the administrator via centralized management that reduces the convolution of managing standalone systems.

Apart from this, IshanTech also offers an enterprise-wide Web-based PC power management software—PowerStudio—to reduce expenses and meet corporate sustainability goals. This allows organizations to monitor their power consumption on a real-time basis and provides reporting with provision of high availability and accuracy. Elaborating on this, Rames A. Bala, Director of IshanTech affirms, "Having the core in IT Security and Green Technology, we also work on turnkey projects. We have been successfully supplying hardware devices and advice on the most suitable hardware for our customers' IT and communication requirements."

IshanTech renders Endpoint security and Data Protection solutions to meet the cyber security needs of its customers across the region

Through its expertise in Software Compliance, PC Power Management, Endpoint, and Web Security, IshanTech has established commercial and technical relationship with its customers. The exclusive partnership of the company with ESET, Certero, and WinMagic has strengthened its client portfolio and allows it meet expectations of every client by offering outstanding customer service, increased flexibility, and greater value. Based in Malaysia, the company has deepened its roots in the South East Asia region including Singapore, Indonesia, and Thailand. Further, it intends to spread its wings across other APAC countries as well. **ACO**
